ANMOL DEEP

AI and Machine Learning Engineer

Bengaluru, India · adsk2050@gmail.com · linkedin.com/in/anmoldeep1 · github.com/adsk2050 · adsk2050.github.io

Summary

AI and machine learning engineer, 6 years, IIT Guwahati. Three years building LLM systems end to end: multi-agent systems, RAG pipelines, voice agents, and the evaluation and guardrails around them. Earlier trained, deployed and monitored models on documents, images, and customer data.

Experience

Independent projects · *sole engineer* *Bengaluru* · Sep 2025 – present

- Shrota, an AI phone-survey platform. A researcher designs a survey in a web builder, and a voice agent calls each respondent and asks the questions in Hindi. Built all of it alone. Pre-launch, run on test calls.
- Research, not published: had an LLM rewrite only the changed part of a schema-governed output. On edits it used 172x fewer output tokens than regenerating the whole output (github.com/adsk2050/research-experiments).

Machine Learning Engineer · *Coreworks AI* *Bengaluru* · Mar 2026 – Aug 2026

- Owned part of the multi-agent harness and the correctness of its output, on a product that turns raw business data into traceable reports, decks and spreadsheet models.
- Set up the evaluation framework on Langfuse with test cases from real failed runs, and added input and security guardrails.

Product Engineer · *Aidora Inc (via Multiplier)* *Remote* · Aug 2024 – Sep 2025

- Built voice agents on LiveKit that callers can interrupt mid-sentence, and a multi-agent system that reaches internal APIs through typed tools over Model Context Protocol (MCP).
- Built a retrieval-augmented generation (RAG) pipeline end to end: crawler, cleaning, chunking, embeddings, vector search and reranking.
- Set up the golden dataset and evaluation for the team's text and voice agents, and trained two new engineers.

NLP Engineer · *Staram Analytics* *Remote* · May 2024 – Aug 2024

- Built a knowledge graph of Indian law from thousands of scanned legal documents, with LLM-based entity and relation extraction.

NLP Engineer · *Insurance Samadhan* *Delhi NCR* · Sep 2023 – May 2024

- Trained, deployed and monitored named-entity recognition, document classification and key-information extraction models on insurance documents.
- Built the data-labelling pipeline, and readied the system for an order of 60,000+ documents with a cost analysis of each part.

Senior Associate · *I-PAC* *Bihar* · Sep 2022 – Aug 2023

- Ran data mining and analytics for 4 campaigns, and operations for a 100+ person phone research team.

Data Scientist · *Tata Digital (Tata CLiQ)* *Mumbai / Remote* · Aug 2020 – Sep 2022

- Built recommenders for electronics and fashion from collaborative filtering and image embeddings, evaluated offline with NDCG and recall at 10.
- Built churn prediction, customer lifetime value and RFM segmentation pipelines on PySpark and Databricks. Promoted after one year, then led two graduate hires.

Education

IIT Guwahati · B.Tech Mechanical Engineering, Minor in Product Design Jul 2016 – Jul 2020

Skills

LLM systems: RAG, multi-agent systems, tool calling, structured outputs, LangGraph, LangChain, MCP, Langfuse, Ragas, guardrails, OpenAI API, AWS Bedrock
Machine learning: PyTorch, scikit-learn, XGBoost, LightGBM, Hugging Face, spaCy, recommender systems, Milvus, FAISS
Voice and backend: LiveKit, speech-to-text, text-to-speech, Python, FastAPI, SQL, PostgreSQL, PySpark, Databricks, Docker, AWS, GitHub Actions
